Qumu and Skype for Business

Get more out of your Skype for Business. Any meeting, any device.

What is it?

The Qumu video solution is fully integrated with Skype for Business, providing customers with a video solution for both live collaboration and VOD.

Capture, manage, record and share meetings. Add value to Skype for Business: Your meetings are now securely stored, centrally managed and available on any device.
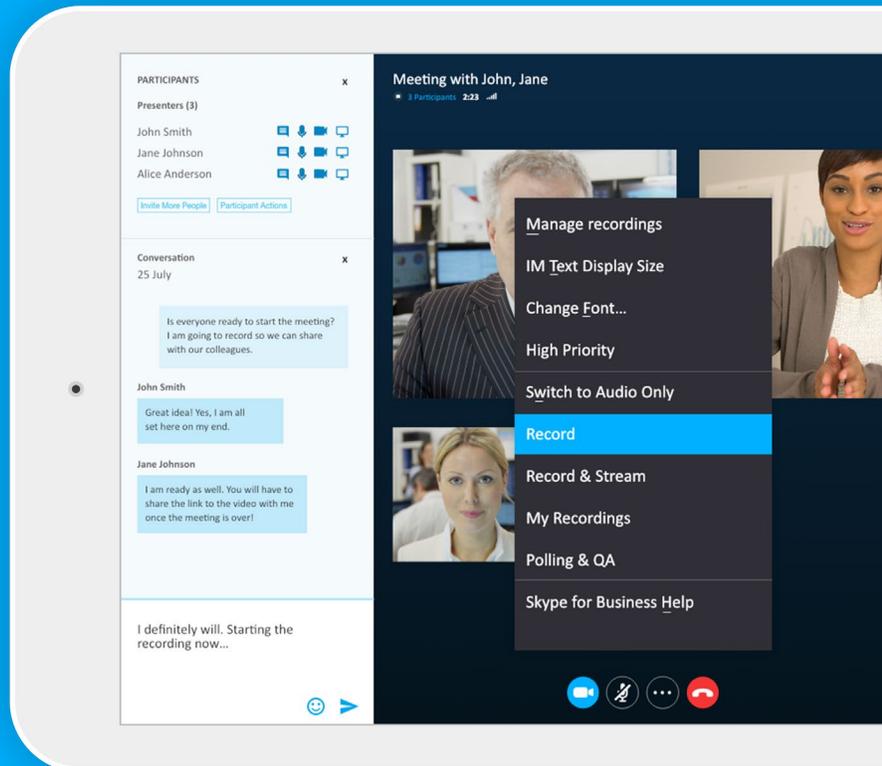

Capture meetings easily and seamlessly within the Skype for Business client, including audio, video, presentations and slides, and chats.

Store Skype for Business meetings securely in a central repository, search their content for spoken words in audio or video as well as text.

Share Skype for Business meetings with others through the portal without impacting network performance, regardless of audience or file size.

Trim or edit Skype for Business meetings to optimize impact and understanding for secondary viewers or listeners.

Manage Skype for Business meetings along with relevant information in SharePoint channels.

Why Qumu + Skype for Business

Integrated directly into Skype for Business menu for easy access to Recording, Streaming and Sharing functionality.

Supports both prescheduled and ad-hoc meetings.

Allows streaming of meetings to other users via a web browser.

Indexing meeting data and audio track for extensive search and retrieval capabilities.

User options are based off their corporate security profile including access control, sharing and media management.

Utilizes your retention and security policies to manage and secure content.

Meetings are available to share immediately after event.

Enable a consistent, rich collaboration experience in all types of meetings.

Get all your communication and collaboration in one place. Never miss a meeting again.

Use Cases

Retain knowledge

Make key meetings, project updates, and other collaborations easily stored and give employees access to a searchable video knowledgebase – to work smarter and faster.

Share experience

Deliver captured sessions throughout your organization to any endpoint - desktop or device - with no worries about file transfer size regardless of whether the meetings contain audio, video, presentations, or all of these.

Large meeting broadcast

Schedule, produce, and broadcast meetings or events to large online audiences with 30,000+ attendees. Plus keep your audience engaged with Q&A and polling.

Boost productivity across your organization.	**Make knowledge transfer easy.**	**Optimize assets and scale your investment efficiently.**	**Increase ROI.**
Video collaboration solution for agile teams.	Record and build a library of collaboration sessions. Teams can view or review meetings and documents any time.	Leverage the tools that you already have. Repurpose content for internal and external audiences.	Reach large online audiences with just one click.
